

Experience the benefits of Invisalign®

CUSTOMISED - created from 3D impressions of your teeth, your custom-made aligners fit perfectly for the most efficient treatment available.

EFFECTIVE - enjoy your new smile straight away, because your teeth will begin aligning right from the very start of your treatment.

REMOVABLE - completely removable appliances allow you to eat and drink what you want, brush and floss as normal, and even take the occasional break from your aligners for a short time.

COMFORTABLE - no irritating metal brackets or wires used, therefore less time in the chair having adjustments made.

CLEAR - no longer feel uncomfortable about wearing ugly, old-fashioned braces, as Invisalign® treatment will be virtually invisible.

A revolutionary new way to straighten teeth without braces

Being able to achieve a beautiful straight smile without compromising on appearance is what has led to Invisalign® becoming the custom-made orthodontic solution of choice for adults.

Many adults who desired a straight smile were reluctant to undergo orthodontic treatment due to the impact that metal braces would have on social and professional situations. Therefore, Invisalign is perfect for adults, as it is an invisible method of straightening teeth without braces. It combines cutting-edge technology with a revolutionary manufacturing method to produce a treatment customised just for you.

The best part of Invisalign® is the way it fits easily into your daily routine. With no metal wires or brackets, your aligners are incredibly comfortable to wear, and can be easily removed when needed; for example, when going out or for special occasions.

Invisalign® Treatment

Invisalign® consists of a series of clear custom moulded aligners made using 3-D computer imaging software. These aligners are swapped every two weeks, as your teeth begin to move gradually into alignment, until they have straightened to the final correct position.

Invisalign® uses computer imaging to design a complete treatment plan for you, from your initial situation right through to your final desired result. We then create your series of custom-made aligners from a clear, strong, medical-grade plastic.

At each stage, only certain teeth are allowed to move, according to your predetermined orthodontic treatment plan for that particular stage. The end result is the most efficient teeth straightening method for your situation.

No more metal braces

In most cases, Invisalign® is just as effective at straightening teeth as traditional braces. Just like metal brackets and wires, it moves your teeth with the use of gentle, controlled force. The main difference is that Invisalign® not only controls this force, but also controls exactly when this force is applied.

Unlike traditional metal braces, your aligners are completely removable, so you can eat, drink and clean your teeth as normal. Best of all Invisalign® is transparent and almost invisible, so you can achieve the smile you've always wanted, without anyone noticing you're receiving treatment.
